Project Proposal

Project Title

Personal Expense Tracker & Financial Management Web Application

Project Overview

This web application enables users to efficiently manage their personal finances. The system allows users to log their income/expense. Users are able to categorise their transactions, track how much they are spending each month and set budgets. The dashboard features interactive charts displaying total income, total expenses, current balance and budget usage. The user will be able to search and filter their transactions by date, category and type. Users will also be able to view a summary of their financials for each month. This application uses a mysql database to securely store the users financial information. The application uses PHP to handle requests. This application has a responsive design which was created using HTML, CSS & JavaScript to provide a convenient experience for desktop and mobile. The aim of this project is to improve personal finance awareness, make it easier to track expenses and make better decisions when budgeting.

Technology Used

- ➔ Front-end: HTML5, CSS3, JavaScript
- ➔ Back-end: Core PHP
- ➔ Database: MySQL
- ➔ Tools Used: Visual Studio Code, XAMPP, Git & GitHub
